■ OEM Multipurpose Block HD Corona Camera

Models: UV-EYE, UV-EYELite

DayCor® UV-EYES are bi-spectral UVc-Visible solar blind block cameras for OEM integration. O I's UV-EYES are robust, rugged and light in weight. They are used for inspecting arcing. The incorporated DayCor® technology ensures high sensitivity to ultraviolet (UVc) radiation, which is manifested in excellent detection. EYES do not miss any discharge, whether near or far, single or multiple that are enclosed in the cameras' FOV. It should be noted that non-destructive tests depend on the sensor's sensitivity. O I's DayCor® technology is, by far, the most sensitive and reliable solar blind UVc detection technology and therefore incorporating as OEM in any inspection system.

O I offers 2 models of EYES, that differ in their physical dimensions, zooming, FOV and sensitivity: EYE and EYELite, as can be seen in their specification integrated as OEM on railways' testing wagons, on vehicle roofs, robots, ATVs, as stationary cameras and in aerial systems.

UV-EYES on Vehicles, Robots and ATVs

O l's UV-EYES deliver information about encountered UV radiation. UV-EYES transmit their output video to a remote monitor where inspectors can virtually see, in real time, both the discharge and the faulty elements. Integrating and mounting O l's EYES is self explanatory with the aid of a detailed instruction guide and with O l's support.

UV-EYES on Railways' Testing Wagons

UV-EYES are indispensable to ensure the safe ongoing supply of railways electrical traction. UV-EYES can run be configured to run automatically, scan the railways overhead lines and stream visual data with UV signals of corona that disclose the condition of the inspected installations. Data can be collected for AI and ML and reports.

UV-EYES on Fixed Mounts

O l's UV EYES can assist maintenance teams monitor 24/7 critical electrical apparatuses. Detecting UV corona & arcing in real time reveals faults in their early stages. O l's UV-EYES assist assets managers extend the life time of critical, costly or rare components and ensure the uninterrupted reliable supply of power.

Seeing Faults in Real Time is a Game Changer

DayCor® UV-EYES camera cores add critical information on deficiencies in high/medium voltage systems caused either by bad design, structural & m eroded insulation, loss of hydrophobicity and other voltage related issues. Integrating DayCor® OEM EYES is cost effective due to their:

- Performance
- Sensitivity
- Detection virtues
- Real time data streaming
- High resolution videos
- Pinpointed visual display of multiple existing discharges Remote & nearby installations
- Easy installation & Integration
- Simple operation

Outstanding Features

Block Camera	Optical Sensors	Remotely Controlled	Visible & UV zoom
Light & Compact	HD	Hi sensitivity to corona	Geo Positioning
Recording & playback		Video out to external monitor
